

Position a knot with ease!

Step 1: hold the thread between thumb & index finger then wrap it in a loop round the fingers, back up to the thumb and index finger & underneath the first section of thread so that it will make an ordinary knot.

Step 2: slip a tweezers through the loop and grip the silk thread at the point you want to make the knot (ie tight against the bead). Make sure the tweezers don't slide. You can drop the thread now and pull the long end which will make the knot slide down to the position of the tweezers. Remove tweezers and pull the thread tight.
